## Find a node in a Binary Search Tree

```
Node *& find(KType key, Node *& r) {
  if (r == NULL) return r;
  if (key < r->key)
    return find(key, r->left);
  if (key > r->key)
    return find(key, r->right);
  return r;
}
```

## Insert into a Binary Search Tree

```
void insert(KType key, Node *& root) {
  Node *& target = find(key, root);
  if( target != NULL) {
    cerr << "Duplicate:" << key << "\n";
  }
  target = new Node(key);
}
```

## Find node with minimum key in BST

```
Node *& findMin(Node *& root) {
  if( root == NULL || root->left == NULL )
    return root;
  return findMin(root->left);
}
```

## Remove a node from a Binary Search Tree

```
void remove(KType key, Node *& root) {
