## Today

---

- Announcements
  - Assignment 3: signup at <http://doodle.com/9g5hndwk2denfx74>
  - Don't forget to sign up for face-to-face grading in time! This is necessary to get a mark for the assignment. Sign up will close on Sunday night.
  - Assignment part 2 discussion
  - Last call for unclaimed umbrella, left during office hour
  
- Texture mapping, continued

2

## Texture mapping

---

- In basic texturing, we simply 'glue' part of an image onto a triangle by specifying texture coordinates at the three vertices.

3

## Texture mapping

---

- Bunch of OpenGL/WebGL functions to load a texture and set various parameters (lin/const, mipmap, wrapping rules).
- A uniform variable is used to point to the desired texture unit

4

## Texture mapping

---

- Varying variables are used to store texture coordinates.
- In this simplest incarnation, we just fetch r,g,b values from the texture and send them directly to the frame buffer.

5

## Texture mapping

---

- Alternatively, the texture data could be interpreted as, say, the diffuse material color of the surface point, which would then be followed by the diffuse material computation described earlier.

6

## Steps for Texture Mapping

1. Create a *texture object* and load texels into it
2. Include *texture coordinates* with your vertices
3. Associate a *texture sampler* with each texture map used in shader
4. Retrieve texel values

(Reference: Red Book)

7

## Texture coordinates from last class

Vancouver has  
coords (-123, 49)

Texture map

Texture  
Image

latitude &  
longitude are  
coordinates.

# Texture coordinates

3D Earth

2D Earth (longitudes)

Object.

Texture

Aside: texture mapped coordinates or s,t are named by convention  
 u,v  
 Others like Hough

(1) Smooth parameterization

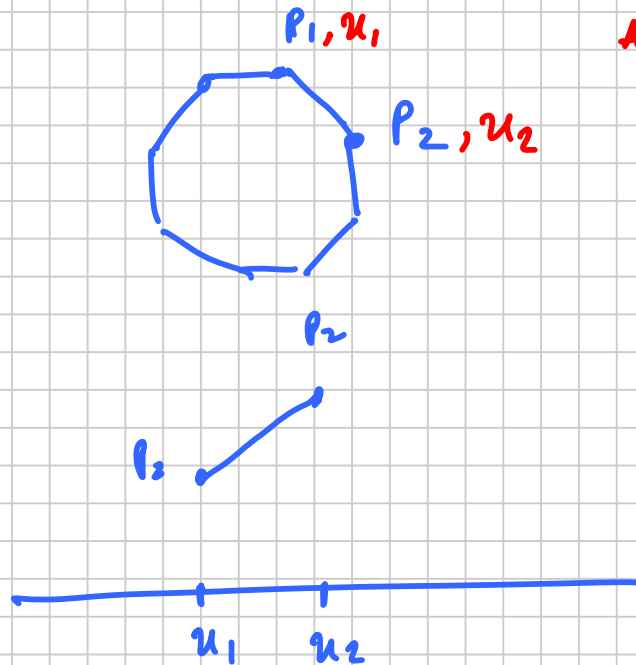

$$P = \begin{pmatrix} r \cos u \\ r \sin u \\ 1 \end{pmatrix}$$

$$u = \tan^{-1} \left( \frac{P_y}{P_x} \right)$$

Can't do this for most real objects

## (2) Piecewise linear mapping

A new per-vertex attribute

linear interpolation between vertex values approximates the mapping.

Same machinery as previous classes L21, L22

$u, v$  are called texture coordinates.

One more refinement: want to abstract out the fact that texture images have finite extent

$u$  between 0 & 1 within image, outside this, coordinates can repeat, or be clamped.

## Second basic example: Texture mapping a square

---

- See Appendix A.4

11

## Texture mapping in OpenGL (WebGL is very similar)

---

- `initGLState()`

```

...
glActiveTexture(GL_TEXTURE0);
glGenTextures(1, &h_texture);
glBindTexture(GL_TEXTURE_2D, h_texture);
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_WRAP_S, GL_CLAMP);
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_WRAP_T, GL_CLAMP);
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_MIN_FILTER, GL_LINEAR);
glTexParameteri(GL_TEXTURE_2D, GL_TEXTURE_MAG_FILTER, GL_LINEAR);
int twidth, theight;
packed_pixel_t * pixdata = ppmread("reachup.ppm", &twidth, &theight);
assert(pixdata);
glTexImage2D(GL_TEXTURE_2D, 0, GL_SRGB, twidth, theight, 0, GL_RGB,
GL_UNSIGNED_BYTE, pixdata);
free(pixdata);
...

```

12

## Texture mapping

---

- `initShaders()`

```

h_texUnit0 = safe_glGetUniformLocation(h_program, "texUnit0");
h_aTexCoord = safe_glGetAttribLocation(h_program, "aTexCoord");

```

- `display()`

```

safe_glUniform1i(h_texUnit0, 0);

```

- Texture location (0,0) → lower left, (1,1) → upper right

```

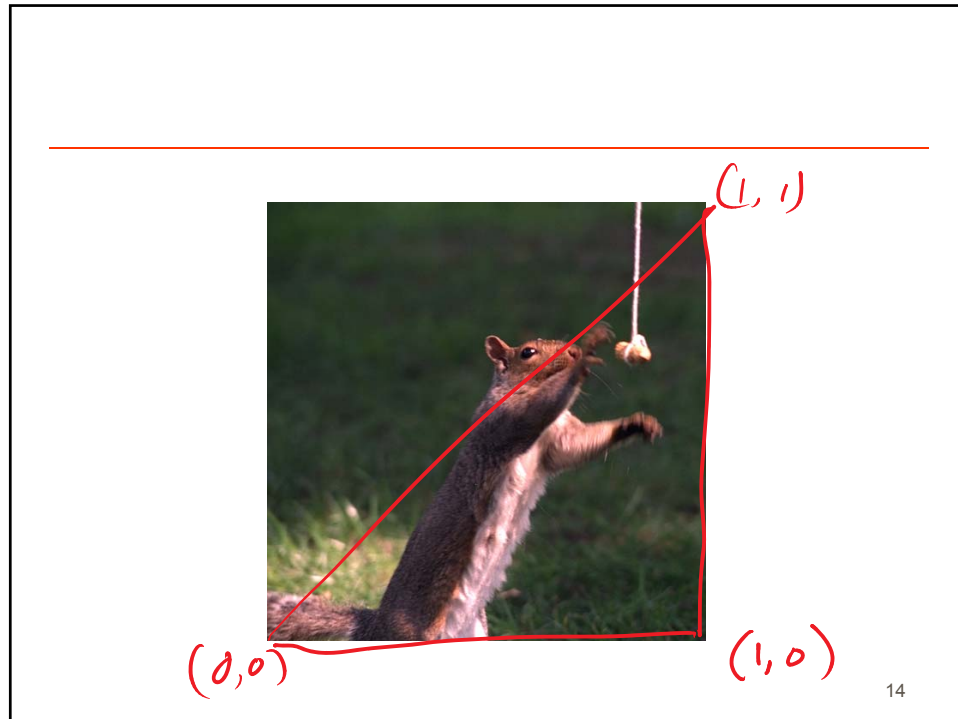

GLfloat sqTex[12] =
{
    0, 0,
    1, 1,
    1, 0,

    0, 0,
    0, 1,
    1, 1
};

```

13

## Texture mapping

- Vertex shader, just “pass through”

```
#version 330
uniform float uVertexScale;
uniform mat4 uProjMatrix;
uniform mat4 uModelViewMatrix;
in vec2 aVertex;
in vec2 aTexCoord;
in vec3 aColor;
out vec3 vColor;
out vec2 vTexCoord;

void main()
{
    gl_Position = vec4(uProjMatrix * uModelViewMatrix * aVertex);
    vColor = aColor;
    vTexCoord = aTexCoord;
}
```

## Texture mapping

---

- Fragment shader changes

```
#version 330

uniform sampler2D texUnit0;
in vec2 vTexCoord;
out vec4 fragColor;

void main() {
    vec4 texColor0 = texture2D(texUnit0, vTexCoord);
    fragColor = texColor0;
}
```
