All sections are out of 4 except the achievement of goal which is 2 sub sections both out of 4. Marks will be assigned as follows:
4 is for above and beyond. The group did such a superb job in the category that you believe they deserve bonus marks.
3 is for good job. This is the normal 100%. This means that the group has done everything correctly in the category.
2 indicates a satisfactory performance. There’s usually some minor problem in that category.
1 indicates a passing performance. The group has done a bare minimum in that category.
0 indicates a failing performance. The group has done nothing in this category.

Stuff to consider for each category:
Communication: pacing, eye contact, voice projection, effective use of webpage or presentation tool (pictures, power point, if any)
O & P : efficient usage of time allowed. The presentation was rehearsed (not “winged it”). If the presentation was cut off due to time limit reached or the presentation took less than 7 minutes, the group can receive a maximum of 2. If a group was late for their scheduled time, the group can receive a maximum of 2.
Achieving Goals: For a research project, the group must demonstrate how they have explored the connection between CS and another field in depth (out of 4). (Saying I can use excel to analyze data for a presentation should receive 1). The group must also demonstrate technical computer skills - writing and usage of functions, CSS, new HTML codes, usage of different libraries, etc (out of 4)
For a technical project – the technical component will be out of 8. You give a mark out of 4 then multiply by 2.
Challenge: A description of any problems faced and what solutions were found. Since you are expected to do demonstrate things that you learned on your own, all groups should have run into some difficulties.
