Lecture 8 – Experiments IV
J. McGrenere

1. Provide 2-3 elements that made this paper easy and hard to read:

   Easy:
   
   1.
   2.
   3.

   Hard:
   
   1.
   2.
   3.

2. What was the value of piloting AND having 2 separate studies?

3. What were the experimental designs for Study 1 and Study 2

   Study 1:

   Study 2:

4. Why did participants only see one prediction accuracy? (50% or 79%)

5. What is the value of full counterbalancing?

6. Why was a 3-way ANOVA used even though there are only 2 independent variables?

7. What can we conclude from the inferential statistics for H1 in Study 1?
